14th Euechem Conference on Stereochemistry Bürgenstock, April 30 - May 6, 1978

President: **H A Staab**

	MONDAY – Moderator: P Pino
Ch Tamm	Synthetic and biosynthetic studies on natural products
C H Heathcock	An approach to the total synthesis of macrolides using stereoselective aldol condensations
L D Barron	Raman optical activity
	TUESDAY – Moderator: L Salem
R Hoffmann	Stereochemistry and conformational preferences in organometallic complexes
Nguyen Trong Anh	A theoretical study of the stereochemistry of some nucleophilic additions and substitutions
N J Turro	The stereoelectronic requirements of photochemical and chemiluminescent organic reactions
	WEDNESDAY – Moderator: A S Dreiding
G Illuminati	Ease of ring formation by intramolecular reactions
H H Wasserman	Recent studies on oxygenation of organic compounds
	THURSDAY – Moderator: D Seebach
M Lahav	The planning and execution of an "absolute" asymmetric synthesis of polymers with quantitative enantiomeric yield
H Hopf	A novel cyclophane synthesis and its applications
Ch Rüchardt	Stability, strain and structure of crowded hydrocarbons
	FRIDAY – Moderator: D H R Barton
Th Wieland	The stereochemistry of some bicyclic peptides
V F Bystrov	Solution conformations by NMR technique: from peptides to proteins
W Guschlbauer	Conformational features of nucleotides, oligonucleotides and nucleic acids
Ch Weissmann	Site-directed mutagenesis as a tool in genetics
