22nd Euechem Conference on Stereochemistry Bürgenstock, April 27 - May 3, 1986

President: **Ekkehard Winterfeldt**

	MONDAY – Moderator: D Seebach
M F Semmelhack	Metal-diene and carbene complexes: reactivity and applications in synthesis
M T Reetz	Reactions of organotitanium reagents
W A Herrmann	Bare main-group elements as useful building blocks in organo transition metal chemistry
	TUESDAY – Moderator: H Wynberg
S Warren	Stereochemical control in synthesis by PhS migration
G Solladie	Recent applications of optically active sulfoxides in asymmetric synthesis
T Hayashi	Asymmetric synthesis catalyzed by chiral ferrocenylphosphine transition metal complexes
	WEDNESDAY – Moderator: P Potier
R Kaptein	Determination of biomolecular structures from two-dimensional NMR data restrained molecular dynamics refinement
W Saenge	Dynamics and cooperativity of hydrogen bonding
	THURSDAY – Moderator: C Tamm
J B Jones	Asymmetric synthesis using enzymes
M Ohno	Creation of novel chiral synthons with pig liver esterase and the application to some natural products synthesis
K Mori	Synthesis of bioactive natural products of agricultural interest
	FRIDAY – Moderator: C Ruechardt
L E Overman	Stereocontrolled synthesis of heterocyclic natural products
K C Nicolaou	New synthesis technology and total synthesis
A I Meyers	Novel asymmetric C-C-bond forming reactions
