36th ESF/Euchem Conference on Stereochemistry Bürgenstock, April 28 - May 4, 2001

President: **Andrea Vasella**
Vice-President: **Lia Addadi**
Guest of Honor: **Duilio Arigoni**

Elias J Corey	SUNDAY Morning Session – Moderator: Jean-François Normant Catalytic enantioselective synthesis methods, pathways and applications
Gerhard Erker	Catalytic and stoichiometric carbon-carbon coupling at zirconium complexes
Tohru Fukuyama	SUNDAY Evening Session – Moderator: G Michael Blackburn Synthetic studies on indole alkaloids
Nenad Ban Stefan Matile	MONDAY Morning Session – Moderator: Jay Siegel Structure and function of the large ribosomal subunit Bioorganic chemistry of rigid-rod molecules
Samir Z Zard	MONDAY Evening Session – Moderator: Armido Studer Explorations in radical chemistry: some new reactions for organic synthesis
Rowena G Matthews Gideon Davies	TUESDAY Morning Session – Moderator: David Gani Cobalamin-dependent methyl transfers Structures and mechanisms involved in the enzymatic synthesis and degradation of polysaccharides
Renato Zenobi Steve W Homans	WEDNESDAY Morning Session – Moderator: Beat H Meier New applications for soft ionization mass spectrometry Structure, dynamics and interactions of macromolecules in the weakly aligned state
Hung-Wen Liu	WEDNESDAY Evening Session – Moderator: Bernhard Kräutler Learning nature's strategy for making unusual sugars
John F Hartwig	THURSDAY Morning Session – Moderator: Peter Chen Transition metal-catalyzed saturated carbon-heteroatom bond formation
Gregory C Fu	Asymmetric catalysis with 'planar-chiral' heterocycles
Gerald W Hart	THURSDAY Evening Session – Moderator: Lia Addadi Dynamic o-glycosylation of nuclear & cytoskeletal proteins: a new paradigm for regulation and signal transduction
