6th Eucchem Conference on Stereochemistry Bürgenstock, May 3 - 9, 1970

President: **E Havinga**

	MONDAY – Moderator: J D Dunitz
W N Lipscomb	Structure and function of carboxypeptidase A
J N Jansonius	Structure of papain
I Schechter	Stereochemistry of binding of substrates and inhibitors of papain
W D Ollis	Conformational behaviour of substituted olefins
	TUESDAY – Moderator: C H DePuy
H A Staab	Some stereochemical problems in the benzoannulene and benzodehydroannulene series
G S Hammond	Stereochemistry and excited states
E Heilbronner	Some applications of photoelectron-spectroscopy
	WEDNESDAY – Moderator: G Quinkert
D Bryce-Smith	Stereochemical aspects of the photochemistry of benzene
J J C Mulder	Permutation symmetry in concerted reactions
	THURSDAY – Moderator: J Sicher
J B Hendrickson	The shape of cycloheptane
J M Lehn	Cryptates, a new class of metal cation complexes
R H Martin	The helicenes
	FRIDAY – Moderator: L J Oosterhoff
L Salem & H Kagan	Narcissistic reactions
G M J Schmidt	Reactions in chiral crystals
D Arigoni	Stereochemical aspects of some pyridoxal-phosphate catalyzed reactions
